

**TROPICAL CYCLONE BULLETIN NO. 2**

**Tropical Depression CHEDENG**

Issued at 5:00 PM, 06 June 2023

Valid for broadcast until the next bulletin at 11:00 PM today.

**“CHEDENG” SLIGHTLY INTENSIFIES AS IT MEANDERS OVER THE PHILIPPINE SEA EAST OF EASTERN VISAYAS**

<b>Location of Center (4:00 PM)</b>	
The center of Tropical Depression CHEDENG was estimated based on all available data at <b>1,150 km East of Southeastern Luzon (12.9°N, 134.8°E)</b>	
<b>Intensity</b>	
Maximum sustained winds of <b>55 km/h</b> near the center, gustiness of up to <b>70 km/h</b> , and central pressure of <b>1002 hPa</b>	
<b>Present Movement</b>	
<b>Almost stationary</b>	
<b>Extent of Tropical Cyclone Winds</b> <b>Strong winds</b> extend outwards up to <b>360 km</b> from the center

**TROPICAL CYCLONE BULLETIN NO. 2**

**Tropical Depression CHEDENG**

Issued at 5:00 PM, 06 June 2023

Valid for broadcast until the next bulletin at 11:00 PM today.

**TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT**

No Wind Signals hoisted at this time.

**HAZARDS AFFECTING LAND AREAS**

**Heavy Rainfall Outlook**

Tropical Depression CHEDENG is unlikely to directly bring heavy rainfall over any portion of the country in the next 3 to 5 days.

Although the current forecast scenario for this tropical cyclone may result in the enhancement of the Southwest Monsoon, the timing and intensity of monsoon rains over the country (especially in the western portion) may still change due to the dependence of monsoon enhancement on the forecast movement and intensity of CHEDENG and its interaction with the other weather systems surrounding it. As such, the public is advised to continue monitoring for updates regarding the possible enhancement of the Southwest Monsoon. **A Weather Advisory will be issued by PAGASA should there be an increasing chance of monsoon heavy rainfall within the next three days.**

**Severe Winds**

The hoisting of Wind Signals in anticipation of tropical cyclone severe winds is unlikely at this time.

The Southwest Monsoon may be strengthened as a result of CHEDENG, but under the current forecast scenario, the likelihood of intermittent wind gusts resulting from the monsoon winds may still change because the monsoon enhancement depends on the forecast movement and intensity of CHEDENG and its interaction with the other weather systems around it. As such, the public is advised to continue monitoring for updates regarding the possible enhancement of the Southwest Monsoon.

**HAZARDS AFFECTING COASTAL WATERS**

Tropical Depression CHEDENG remains unlikely to cause rough sea condition over the coastal waters of the country in the next 24 hours.

**TRACK AND INTENSITY OUTLOOK**

- As CHEDENG continues to consolidate while intensifying, it is forecast to gradually accelerate and move generally northwestward in the next 24 hours before turning west northwestward on Thursday. Afterwards, the tropical cyclone will begin turning towards the northwest on Friday and to the north during the weekend. Throughout the forecast period, CHEDENG will remain far from the Philippine landmass.
- Owing to favorable environmental conditions, CHEDENG is forecast to intensify in the next 4 days and may be upgraded to tropical storm category in the next 12 hours. This tropical cyclone may reach typhoon category by Thursday and reach its peak intensity on Friday or during the weekend while over the Philippine Sea east of Northern Luzon.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 11:00 PM today.
